

Shift

Unpack your Shift and set it where you'd like it. Your touch point is the tuft — the metal fastener at the top of the felt stack. Plug the included USB-C adapter into a wall outlet, connect the included cable to the adapter, then plug the other end into the port near the bottom of the cork base. Leave the tuft alone while you're connecting power. The lamp comes on at the brightness it was last set to — 50% out of the box — and that's setup done. A light tap on the tuft turns it off, and another turns it back on. Touch and hold to bring the brightness up, letting go when you like the level; the lamp flashes when it reaches full. Hold again to bring it down, and it flashes once more at the low end of the range. Your lamp remembers its brightness, so it returns to the level you left it at — after switching off, and after a power outage. If anything ever seems out of sorts, unplug the lamp and plug it back in.

NOTES

- The included USB-C adapter and cable are provided for powering your lamp only. Using them for any other purpose may void the warranty.
- The included adapter is USB-C PD, 12V / 3A. Any replacement must match that specification or the lamp will not operate.
