1. General dimensions of the lamp.
2. Unthread the nut (A) from the canopy (B) and detach the canopy from the base plate (C).
3. Pass the electrical connection cable through the hole in the base plate (C) and secure it to the ceiling using the plugs, washers and lag screws provided.
Thread the steel wire (F) through the nut (A) and canopy (B). Tighten part (E) on the tensor (D) and route the steel wire (F) through the tensor, pulling it out the side. Tense the cable at the desired length. Secure the safety lock for the steel wire (G). Cut the leftover. Make the electrical connections. Connect the ground (J) on the canopy in the connection strip. Secure the canopy.
4. Remove the cover (H) using a flat-head screwdriver. Screw the bulb into the bulb holder. Return the cover to its position.

Consumer information:

- Lamps without the IP mark are classed as IP20 and are designed for general interior use, except wet areas (bathrooms, etc.)
- Lamps with the IP mark are designed for exterior use and in wet areas. (E.g. IP54)
- They offer guaranteed protection to people and animals against electrical discharge:
 - Class I: through single electrical insulation and an earthing conductor once correctly connected.
 -  • Class II: through double electrical insulation.
 -  • Class III: these kinds of lamps should be connected at very low voltage levels (generally 12V); therefore there is no risk.
-  • Lamps with this symbol, or without any symbols, can be mounted directly onto normally inflammable surfaces.
-  • Lamps with this symbol cannot be mounted directly onto normally inflammable surfaces.
- The safety of this lamp is guaranteed by using a maximum wattage bulb that does not exceed the figure displayed visibly on the lamp.
-  • The product cannot be treated like conventional domestic waste; it must be taken to the corresponding recycling point for electrical and electronic equipment.
